nomorSatu.java

Run ▶

```java
public class nomorSatu {
    public static void main(String[] args) {
        int[][] nilaiMahasiswa = {
            {85, 90, 80, 95},
            {75, 70, 80, 95},
            {90, 95, 60, 70},
        };
        System.out.println("---Rata-rata Nilai Setiap Mahasiswa---");
        for (int i = 0; i < nilaiMahasiswa.length; i++) {
            double total = 0;
        for (int j = 0; j < nilaiMahasiswa[i].length; j++) {
            total += nilaiMahasiswa[i][j];
        }
            double rataRata = total / nilaiMahasiswa[i].length;
            System.out.printf("Mahasiswa ke-%d: %.2f\n", (i + 1), rataRata);
```

Output

```
---Rata-rata Nilai Setiap Mahasiswa---
Mahasiswa ke-1: 87.50
Mahasiswa ke-2: 80.00
Mahasiswa ke-3: 78.75
```

nomorDua.java

Run ▶

```java
public class nomorDua {
    public static void main(String[] args) {
        int[][] matriks = {
            {1, 2, 3},
            {4, 5, 6},
            {7, 8, 9},
        };
        System.out.println("--- Matriks Asli (3x3) ---");
        tampilkanMatriks(matriks);
        int[][] transpose = new int[3][3];
        for (int i = 0; i < 3; i++) {

        for (int i = 0; i < m.length; i++) {
            for (int j = 0; j < m[i].length; j++) {
                System.out.print(m[i][j] + "\t");
            }
            System.out.println();
    }
}
}
```

Output

```
--- Matriks Asli (3x3) ---
1   2   3
4   5   6
7   8   9

--- Hasil Transpose Matriks ---
1   4   7
2   5   8
3   6   9
```

nomorTiga.java

Run ▶

```java
public class nomorTiga {
    public static void main(String[] args) {
        int[][] matriks = {
            {14, 24, 40},
            {45, 10, 90},
            {20, 80, 77},
        };
        System.out.println("--- Matriks ---");
        for (int i = 0; i < matriks.length; i++) {
        for (int j = 0; j < matriks[i].length; j++) {
            System.out.print(matriks[i][j] + "\t");
        }
        System.out.println();
        }
        int nilaiMaks = matriks[0][0];
        int barisMaks = 0;
        int kolomMaks = 0;
        for (int i = 0; i < matriks.length; i++) {
```

Output

```
--- Matriks ---
14  24  40
45  10  90
20  80  77

--- Hasil Pencarian ---
Nilai terbesar : 90
Posisi baris : ke-2
(indeks 1)
Posisi kolom : ke-3
(indeks 2)
```

nomorTiga.java

Run ▶

```java
            for (int j = 0; j < matriks[i].length; j++) {
            if (matriks[i][j] > nilaiMaks) {

 1) + " (indeks " + kolomMaks + ")");

}
}
```

Output

```
--- Matriks ---
14  24  40
45  10  90
20  80  77

--- Hasil Pencarian ---
Nilai terbesar : 90
Posisi baris : ke-2
(indeks 1)
Posisi kolom : ke-3
(indeks 2)
```

nomorEmpat.java

Run ▶

```java
public class nomorEmpat {
    public static void main(String[] args) {
        int[][] matriks = {
            {14, 24, 40},
            {45, 10, 90},
            {20, 80, 77},
        };
        int jumlah = hitungDiagonalUtama(matriks);
        System.out.println("Hasil penjumlahan diagonal utama
adalah: " + jumlah);
    }
    public static int hitungDiagonalUtama(int[][] mat) {
        int sum = 0;
        int n = mat.length;
        for (int i = 0; i < n; i++) {
            sum += mat[i][i];
        }
        return sum;
```

Output

```
Hasil penjumlahan diagonal
utama adalah: 101
```

stringLima.java

Run ▶

```java
public class stringLima {
    public static void main(String[] args) {
        String kalimat = "Belajar pemrograman itu sangat menyenangkan";

        int jumlahKata = hitungJumlahKata(kalimat);

        System.out.println("Kalimat: \"" + kalimat + "\"");
        System.out.println("Jumlah kata: " + jumlahKata);
    }
    public static int hitungJumlahKata(String teks) {
        if (teks == null || teks.trim().isEmpty()) {
            return 0;
        }
        String[] kataArray = teks.trim().split("\\s+");
        return kataArray.length;
    }
}
```

Output

```
Kalimat: "Belajar pemrograman itu sangat menyenangkan"
Jumlah kata: 5
```
